

MENDED LIGHT

Logo Usage & Style Guide

Primary Logo

The primary logo is inspired by a lantern with a flame. The flame is in 2 pieces that appear to be mending together and also form a monogram M in the negative space.

Mended Light

The Mended Light logo has been designed to be produced at a minimum width of .59 inches for print.

On the web the minimum size of the logo is 42 pixels wide. There is no maximum reproduction size of the logotype.

Primary Logo Isolation Area

The Mended Light logo should always be surrounded by a minimum area of space. This space should be the equivalent to the width of the flame mark on all sides.

This will ensure visual clarity and protect the logo from being encroached upon by any other visual elements.

Horizontal and vertical logos

The other variations of the logo are to be used in circumstances that allow for best readability. The rules about the minimum area of space should be applied to all logos.

Reversed logo

Some circumstances may call for use of a reversed logo. A full white logo should be used on any dark background.

Brand Colors

The 3 colors, that make up the gradient used in the full color logo, have been assigned to specific areas of specialty. The purple is to be used for general trauma, blue for infidelity, and green for healing from divorce.

Social Typography

We use three fonts on our social media posts, Aloja, Permanent Marker, and Alegreya. Each one has been designated a specific purpose in order to communicate clearly. Aloja is reserved for headlines and Permanent Marker is used for sub-headers. Alegreya has many characteristics that make it suitable for body copy. It has a serif and tall x height which make it easier to read at smaller sizes. Also it comes in multiple weights to add contrast when needed.

Social Imagery

Images for social post should first and foremost convey a sense of groundedness and stability. Look for images that feature light as a subject matter or photos of nature. Abstracted patterns found in nature can be used. Images that feel serene and peaceful are best. Select photos that feature a color palette that coordinates with the jewel tones used in the Mended Light logo. The target audience is largely female so images of women work best but women with family will also work. Some subjects to stay away from are photos that focus on men, wildlife, or cityscapes.

Social Posts

Social posts should combine the right imagery with the correct typography. The fonts and style of images have been specifically selected in order to communicate the Mended Light brand. Type should be set directly on top of the image in 100% white for best readability.
